Electricity Doesn't Care...

...If You're Not an Electrical Worker

69%

of electrical deaths befell non-electrical workers.

Improperly maintained equipment can catastrophically fail. NFPA 70E requires safety studies that include maintenance condition.

...If You Didn't Think It Was an Electrical Problem

***Unexpected contact** with energy **causes more electrical fatalities** than anything except overhead power lines.*

Employees working near electrical hazards must receive electrical safety training.

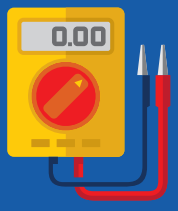

...If You Thought It Was Off

8.4%

of electrical fatalities happened when safety controls were removed or lockout/tagout was ignored.

Qualified persons establish an electrically safe working condition to keep themselves and others safe.
