

Eaton's Mobile Training Platform's Arc Flash Mitigation Solutions, VFD, UPS, and ATS

Customized training for TEGG, an ABM Company

Eaton is proud to offer a customized training on Arc Flash Mitigation Solutions, Variable Frequency Drives, Uninterruptible Power Supplies, and Automatic Transfer Switches for TEGG, an ABM Company.

Learning objective

Learn from experienced experts in a collaborative and interactive environment with traditional classroom method, as well as hands-on demonstrations and exercises on equipment demos and equipment installed in Eaton's Mobile Training Platform(EMTP). Attendees will be able to perform operation and maintenance on the various products covered in the Course Outline.

What to expect with an Eaton Mobile Training Platform?

The Eaton EMTP requires a relative flat area 40 ft x 10 ft. Upon arrival of the trailer, an Eaton representative will set it up and prepare it for your training session. At the end of the training, your Eaton trainer will close the trailer and prepare it for transport.

Eaton trainers are subject matter experts in safe operation and maintenance of electrical distribution equipment. Eaton's EMTP allows hands-on activities in addition to traditional classroom-style training.

Course Topics to include:

Arc Flash Mitigation Techniques:

- Arc Quenching
- Racking Devices
 - FlashGard
 - RPR2
 - MRR1000
 - Integral Racking
- Maintenance Modes
- ZSI

VFDs

- Basics
- Maintenance
